ART UNIT

PAPER NUMBER

2838

DATE MAILED: 01/25/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

4-2

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/777,098	Taniguchi, Makoto	
	<b>Examiner</b>	<b>Art Unit</b>	
	Richard V. Muralidar	2838	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 13 February 2004.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-13 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-13 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 13 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All    b) ☐ Some \*    c) ☐ None of:
- 1) ☒ Certified copies of the priority documents have been received.
  - 2) ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - 3) ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Specification*

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The following title is suggested: Onboard Power Supply with Primary and Backup Battery. Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

[b] The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-11, and 13 are rejected under 35 U.S.C. 102[b] as being anticipated by Nishimura [US-6313546].

With respect to Claim 1, Nishimura discloses an onboard power supply system [col. 1 lines 7-9] comprising: a power generator [Fig. 1 generator 2]; a first electrical power storage device [Fig. 1 battery 16] charged by the power generator; a second electrical power storage device [Fig. 1 battery 15]; and a charge and discharge control device [Fig. 3 controller 17 in conjunction with switch 14] for controlling charge and discharge of the second electrical power storage device based on at least one of a first state quantity that indicates a state of charge of the first power storage device [Fig. 1

Art Unit: 2838

input 34 to controller 17] and a second state quantity that indicates a state of power generation of the power generator [Fig. 1 input 33 to controller 17 from generator 2].

With respect to Claim 2, Nishimura discloses that the charge and discharge control [Fig. 3 controller 17 in conjunction with switch 14] device controls the charge and discharge of the second electrical power storage device [Fig. 3 storage battery 15] when the first state quantity is equal to or smaller than a predetermined value [Fig. 2 Flowchart, steps 102 to 105; col. 3 lines 52-67 and col. 4 line 1].

With respect to Claim 3, Nishimura discloses a power generation control device [Fig. 1 controller 17], wherein the power generation control device is connected with the power generator [Fig. 1 output 31 connects controller 17 to power generator 2] for controlling the state of power generation of the power generator according to operating conditions of a vehicle [Fig. 2 Flowchart, col. 3 lines 8-16].

With respect to Claim 6, Nishimura discloses that the discharge of the second electrical power storage device is disabled during a startup of an engine [Fig. 1 col. 3 lines 19-23; the discharge of the second battery 15 is selectively enabled or disabled by controller 17 depending on whether or not the primary battery has sufficient capacity to start the engine].

With respect to Claim 7, Nishimura discloses that the onboard power supply further comprises an electrical device [Fig. 1 low voltage load 3] that is provided with power by at least one of the first electrical power storage device [Fig. 1 battery 16] and the second electrical power storage device [Fig. 1 battery 15], wherein: the first electrical power storage device functions as a main power supply [battery 16 is the

Art Unit: 2838

primary vehicle battery]; the second electrical power storage device functions as an auxiliary power supply [battery 15 is the secondary or backup battery]; and the second electrical power storage device is capable of supplying the power to the electrical device whenever required [battery 15 is selectively enabled and disabled by switch 14 to supply power to either of or both high or low voltage loads].

With respect to Claim 8, Nishimura discloses that the onboard power supply further comprises an electrical device [Fig. 1 low voltage load 3], wherein: the first electrical power storage device [Fig. 1 battery 16] functions as a main power supply; the second electrical power storage device functions as an auxiliary power supply [Fig. 1 battery 15]; and the second electrical power storage device supplies power to the electrical device along with the first electrical power storage device [via high voltage bus 10 and low voltage bus 11, respectively].

With respect to Claim 9, Nishimura discloses that the second electrical power storage device supplies power along with the first electrical power storage device during the power generation of the power generator [Fig. 1 this situation occurs whenever the engine is running i.e. switch 6 is closed and the generator is outputting power to high voltage bus 10 in order to charge both batteries].

With respect to Claim 10, Nishimura discloses that the second electrical power storage device is directly charged by the power generator during the power generation of the power generator [Fig. 1 battery 15 is directly charged by power generator 2].

With respect to Claim 11, Nishimura discloses that the first electrical power storage device is installed in an engine compartment of the vehicle; and the second

Art Unit: 2838

electrical power storage device is installed in any one of an interior compartment and a trunk compartment of the vehicle [Examiner notes that that placement of the primary and secondary batteries does not impart any additional functionality to the claimed invention; i.e. actual location of either battery would not affect overall functionality].

With respect to Claim 13, Nishimura discloses that the second electrical power storage device is charged by the first electrical power storage device [col. 3 lines 52-67 and col. 4 line 1].

*Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 5, and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishimura [US 6313546].

With respect to Claim 4, Nishimura discloses that the power generation control device reduces the power generation of the power generator when the vehicle is in an accelerating condition [it is standard on automobile supply systems for a voltage regulator (a controller) to reduce the voltage of the power generator (the alternator) when engine rotation increases, otherwise the excessive voltage output of the generator

Art Unit: 2838

could cause damage to the electrical system. The voltage regulator attempts to maintain the output voltage within an acceptable range regardless of engine rotational speed].

With respect to Claim 5, Nishimura discloses that the charge and discharge control device reduces the discharge [opens switch 14] of the second electrical power storage device when the power generation of the power generator is reduced by the power generation control device [this is inherently performed by controller 17- in sensing that main battery 4 no longer requires charging, it will reduce the generator's output, and also open switch 14 for that same reason, since switch 14 is only closed when additional starting power or recharging is required].

With respect to Claim 12, Nishimura discloses that the first electrical power storage device and the second electrical power storage device are rated at same volts. Examiner notes that Fig. 1 battery 15 is denoted by an indicator that obviates to the user that any desirable multiple of secondary batteries can be used, including one. Examiner also notes that using two batteries of equal voltage does not significantly impair the functionality of the circuit since the secondary battery will still be capable of its intended purpose- as a backup for the primary battery. The dc-dc converter would be adjusted accordingly. Refer to Ikawa [5834922] for an onboard system that uses multiple equal batteries.

### ***Conclusion***

The following reference [Murty et al US 6909201] is cited for its disclosure of an onboard power supply with primary and secondary battery, with generator, dc-dc converter, and multiple loads.

Art Unit: 2838

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard V. Muralidar whose telephone number is 571-272-8933. The examiner can normally be reached on Monday to Friday 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Gray can be reached on Monday to Friday 8-5. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
